

ROAD TO SAFETY

See Safely Through Spring Showers

(NAPSA)—Are seasonal rains blurring your driving view? Spring downpours may bring flowers, but they can also cause poor driving visibility. Now there's a solution.

Today's advanced rain-repellent glass treatments actually repel moisture from your windshield, according to Bob Howard of Aquapel Glass Treatment from PPG Industries: "You'll see more clearly through the rain, and encounter far less glare, particularly at night."

Untreated

Treated

Professionally applied treatments like Aquapel last for months, unlike do-it-yourself coatings. "You'll enjoy rain-repellent action all season long," says Howard. And the benefits don't stop there. Aquapel also makes road dirt, bugs, tree sap, ice and snow easier to remove from your auto glass.

Aquapel is installed quickly and inexpensively at many fast lubes, car dealerships and automotive service centers nationwide. For more information, ask your professional or visit the Web site at www.aquapel.com.
