Faces Get The Goat

(NAPSA)—Back when Cleopatra bathed in fresh goat's milk, all skin care treatments were all-natural. Now, you can get the same moisturizing ingredients in an all-natural, fragrance-free skin care line.

The fresh goat's milk products use organic ingredients to promote smooth, healthy complexions. More than just beauty creams and lotions, each hypoallergenic formula relies on vitamins, minerals and proteins, plus the unique properties of exotic botanicals with proven hydrating capabilities, to help keep skin happy and healthy.

The skin, the largest organ of the body, needs to be nourished and pampered.

Fresh goat's milk contains capric and caprylic acids to help maintain an alkalinity level close to that of human skin. This keeps skin from being "stripped" of its natural moisture and protective properties—a common problem with regular commercial soaps.

Clinically proven to hydrate, the Nature by Canus line includes a Moisturizing Clay Mask, Facial Scrub, Night Renewal Facial Cream, Moisturizing Facial Cleansing Milk, Eye Cream and Daily Facial Cream, all made with farm-fresh goat's milk. They're dermatologist tested and have no parabens, phosphates or phthalates.
