

## THREE STEPS TO PREVENT HEART DISEASE FOREVER

(NAPSA)—More than twelve million Americans are ravaged by coronary problems. These patients may be the last generation to suffer from this disease. According to Dr. Peter Salgo, associate director of the Open Heart ICU at New York Presbyterian Hospitals we are on the cusp of an enormous breakthrough in preventing heart attacks—forever.

In his book, *The Heart of the Matter* (William Morrow, \$24.95), Dr. Salgo offers a simple formula to treat people before they get heart disease, which in turn will prevent heart attacks. The program is amazingly simple and will save millions of lives.

**A new book promises to make heart disease obsolete.**

- First, Dr. Salgo says cholesterol busting drugs, marketed as Lipitor, Zocor, Crestor and others, should be available over the counter.

- Next, everyone should be tested for a silent infection called chlamydia pneumonia. Dr. Salgo explains the links between this common bacteria and the causes of heart attack. This is huge news, because if heart disease is an infectious disease, then it can be prevented and cured with antibiotics.

- The final ingredient is aspirin. The surprising news is now we understand why it prevents heart attacks.

The book, which explains the three key breakthroughs to preventing heart attacks, is now in bookstores.
