Soothing Eczema Therapy

(NAPSA)—Approximately 16 million American children and adults suffer from eczema, a chronic skin disorder which is characterized by inflamed, dry, scaling, itchy skin.

Steroid free CAMOCARE Soothing Cream addresses skin conditions associated with eczema.

Topical corticosteroids (steroids) such as hydrocortisone cream have been the primary treatment for eczema. These medications may be effective, but can cause numerous side effects.

An article published in *Holistic Nursing Practice* (January 2003) investigated a steroid-free therapeutic treatment, CAMOCARE Soothing Cream, for providing relief from eczema. The cream has been successfully used and recommended by dermatologists worldwide as an alternative treatment for eczema, without any side effects from steroids. "I have recommended CAMOCARE Soothing Cream to many of my patients and found it really works," says Dr. Dana G. Cohen, M.D. "In fact, I recommend it as a long-term treatment for eczema in children and adults."
