Digestive Disorders, Safer Alternatives

(NAPSA)—There's encouraging news for people who suffer from Crohn's and Irritable Bowel Syndrome. Recent double-blind, placebo-controlled studies show that there are effective drug-free alternatives to aggressive prescription treatments, which are costly and may have dangerous side effects.

Friendly bacteria has been shown to control the gastrointestinal symptoms associated with IBS and Crohn's.

Those alternatives resulted in a significant reduction in abdominal pain and bloating in 57 percent of IBS patients in one study. In another clinical trial, four out of five patients suffering from Crohn's disease were able to stop taking their diarrhea medications for the trial's duration.

Digestive Advantage products from Ganeden Biotech have been shown to help control the symptoms of these two debilitating conditions. Ganeden invested heavily in a research and development effort to analyze virtually every strain of lactobacillus, a lactic-acid-producing bacteria known to help maintain proper gastrointestinal function. The products contain a patented strain of lactobacillus. For a free sample, call Ganeden at (800) 456-0276 or visit www.ganedenbiotech.com.
