

# HINTS FOR HOMEOWNERS

## Spring Your Home Into Spring With A New Look

(NAPSA)—Curbside appeal can mean a great deal, whether you're a builder selling a house or a customer updating the look of your home.

An array of siding, trim and roofing options are available to help give a home more curbside appeal. One way to start is getting rid of outdated siding and updating the look of the home.

"One of the things we have seen in the marketplace is that architects, builders and consumers are not using only one type of siding or roofing on one style of home," said Mike Hartnett, director of building products. "Products are being mixed and matched and chosen because of personal tastes."

Georgia-Pacific manufactures and distributes a wide variety of siding products for use in residential applications, including:

- T1-11 pine plywood siding, which combines the natural beauty of wood with the toughness of plywood;
- Catawba® Hardboard Siding, which is attractive, durable and easy to install;
- Lumber siding, for the look of luxury; and
- Vinyl and Cemplank™ fiber-cement siding products.

Georgia-Pacific is one of America's major sources for roofing supplies. From simple roof coverings to architectural shingles and accessories, the company distributes roofing products for every style of home. Its most popular

**For over a decade, the Summit architectural shingle has been improving the appearance of the American home.**

roofing line is the Summit® Series architectural laminate shingles; its newest line (available only in the Southeast and Midwest) is the Savannah™ shingle. The Savannah features the look and feel of an architectural laminate at a price that falls between a real architectural laminate and a standard three-tab shingle.

Another exterior product that really updates the look of a house is trim. In addition to the traditional solid wood trim, G-P manufactures PrimeTrim®, a unique, pre-primed trim product. It is a precision engineered, high-resin, high-temperature-cured, all-wood fiber composite. Designed to ensure long-term protection under harsh weather conditions, to which exterior trim is typically exposed, PrimeTrim can be used for both interior and exterior applications.
