

HINTS FOR HOMEMAKERS

New System Flushes Away Toilet Cleaning Woes

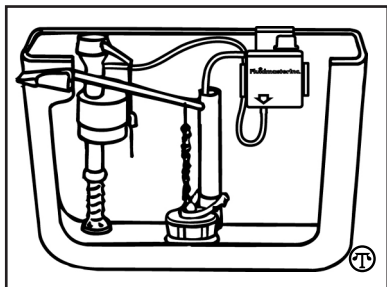

(NAPSA)—When it comes to favorite household chores, it's unlikely that toilet cleaning tops anybody's list. So it's little wonder that retail shelves are loaded with a variety of cleansers and tablets that promise to make this unpopular job less bothersome.

But some of those cleaners can deliver trouble along with aid. Typical drop-in cleaners stay submerged in the tank water, where they can leave residue and chemicals that warp or corrode tank parts and impair proper flushing action. A toilet tank drop-in cleaner can also drift—and possibly wind up in a position where it impedes operation of the flapper.

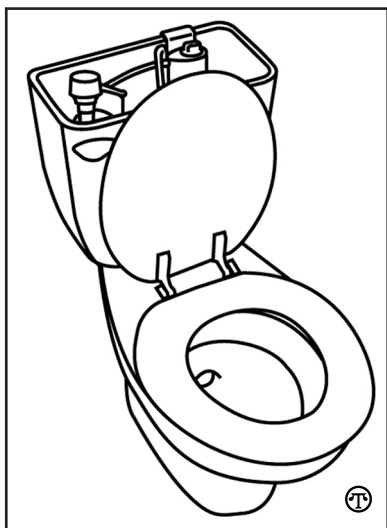

Fluidmaster, a leader in toilet repair, is resolving these dilemmas with the introduction of Flush 'n' Sparkle—a toilet cleaning system that keeps the bowl clean with every flush—without harming your toilet tank parts.

This new technology protects toilet tank parts with an ingenious system that isolates a powerful cleaning agent, releasing it only to the bowl where it's needed. It installs easily, without tools, in less than five minutes. Plus, it reduces the spread of viruses and bacteria, and minimizes hard water buildup. Cartridges are a breeze to replace and are safe to handle without gloves.

The Flush 'n' Sparkle system and refill cartridges are available at home improvement retailers.

A simple-to-install system makes it easier to keep toilets clean with every flush.

Cleaning agent bypasses tank water and is released directly to the bowl where it's needed.
