

Demand Surges For Backup Power Supply

(NAPSA)—Blackouts and storms prompt millions of Americans to take stock of how to cope without electricity. Many are turning to portable generators, according to experts at Honda Power Equipment, manufacturer of a complete range of generators for rental and consumer applications.

“During blackouts and brown-outs, a portable generator provides comfort, safety and security and protects your business operations,” said Tom Pernice of Honda Power Equipment.

Today’s generators offer many options and prices. For example, Honda’s newest EM series deluxe generator models, available through Honda Power Equipment dealers, are ideally suited for home standby applications. The EM generators feature electric start, remote start capability, simultaneous DC charging and also meet the most stringent of environmental standards.

To choose the right generator, start by identifying electrical needs and how much power each requires. Prepare in advance! Read the generator manual and stock up on emergency supplies. And when skies are blue, you can use your generator at the lake, the park, on the boat—even for tailgating.
