

Hints for Handypersons

Welding Is Easy To Do And Affordable

(NASPA)—The handy do-it-yourselfer takes pride in building a new storage shed, putting in a new kitchen floor or even adding on a family room to an older home. What about doing a little at-home welding? It can be easy, fun and affordable.

Welding at home runs the gamut from repair and maintenance of fences, yard equipment, toys and fixtures around the house to creating metal art and race cars. Welding can be easy—with a little practice, patience and knowing what to get.

From November 1, 2002 through January 31, 2003, one of the world's leading arc welding equipment manufacturers, will offer five popular Miller welding units in special bundled packages that save up to \$900 off list price. The packages include everything from an all-in-one MIG welder, the best welding option for beginners, to an engine-driven welder that offers advanced welding capabilities and generator power for emergency power outages.

"Many first-time and price-sensitive buyers often hesitate to purchase accessories that allow them to expand their capabilities, improve results or increase their enjoyment," said Terri Barry, marketing specialist, Miller Electric Mfg. Co. "This special promotion encourages people to get the most out of their power source by pairing it with popular add-on items at a value-added price."

Package options include:

- For the first-timer: Miller-matic 251® all-in-one MIG welder paired with the new Spoolmatic®

15A spoolgun and gas regulator

- Addresses the needs of the experienced welder or artist: New Syncrowave® 180 SD AC/DC TIG/Stick welder paired with the new Stars and Stripes auto-darkening helmet

- Power to address storm outages combined with quality welder: Bobcat® 250 NT welder/generator paired with the new 3045 flux cored wire feeder

- Two-for-one—advanced welding capability teamed with gasoline-powered generator: Trailblazer® 301G welder/generator paired with the new SuitCase 12VS™ wire feeder and FC1260 LM gun

- The best way to cut metal: New Spectrum® 625 plasma cutter paired with a consumables accessory kit and protective cover

Each package in the promotion features new products, unlike offerings that may highlight a previous year's units or over-stocked items. All Miller welding power sources are covered by the company's True-Blue® three-year factory warranty.

For more information about welding or these packages, contact a welding distributor, go to MillerWelds.com or call 800-4-A-MILLER.
