

Expanding Mobile Capability And Business Productivity

(NAPSA)—Mobility is the buzzword of the day when it comes to anything high-tech.

Today's savvy consumers want the ability to go virtually anywhere and maintain access to their personal and professional information—without the weight and hassle sometimes associated with a laptop and its set-up.

Many devices have been introduced to respond to this growing demand, including the Palm handheld, Handspring Visor and Sony Clie. These easy-to-carry gadgets can provide the mobile user with many necessary features, including access to schedules, finances and contact information.

However, a number of people now want to use their handhelds for more than accessing their contacts and calendar items. In today's fast-paced economy, for example, many business users need to perform virtual business functions on the go and demand technology that lets them.

Until recently, performing such tasks with a handheld simply wasn't possible. But now, experts say, a new software package may have changed all of that.

Called Documents To Go, the software lets users create, view and

Advancements in mobile technologies have benefitted users from different walks of life.

edit all of their Word and Excel documents and download e-mails and attachments from any handheld device running on the Palm OS.

Already, a wide range of consumers are discovering how much this program by DataViz, Inc., a leading provider of Palm OS products, can simplify their own lives.

Business travelers are using it to help meet clients' demands even when thousands of miles away from the office. Lawyers are using it to keep track of clients' files and appointments. And doctors and nurses are using it to keep track of patients' records and prescription information.

The technology is available at a number of computer and office supply stores and can also be downloaded from the Web site www.dataviz.com.
