The Battle Against Employee Sabotage

(NAPSA)—Employees account for 60% of computer system break-ins.

To cut eSabotage losses, the eRisk managers at Assurex International recommend eInsurance.

Employees are more likely to hack into computer systems and destroy data than pilfer paper clips.

1. Computer Virus Insurance: In spite of anti-virus software, computer viruses enter systems when employees open infected attachments or download software. Insurance covers losses.

2. Extortion and Reward Insurance: If an ex-employee threatens to crash your server, shut down operations, and violate privacy unless ransom is paid, insurance covers extortion demands and rewards to capture saboteurs.

3. Specialized Network Security Coverage: If your computer security were breached, you could be sued for failure to protect confidential information. Insurance responds to that liability and resulting losses.

4. Business Interruption Coverage: If a disgruntled employee zaps your sytem and prevents you from conducting business you'll lose dollars, credibility, and customers. Insurance mitigates losses.
