

# Musical Intercoms Transform Your Home Into A Safe Haven

(NAPSA)—Safe haven—it's what every home should be. A place where your kids can play in their rooms while you sit back in your favorite easy chair and relax to soft music. A place where you and your family can gather around the dinner table each night and, well, be a family.

You can take the first step toward transforming your home into this safer place with a home communication system from M&S Systems, the leading designer and manufacturer of built-in home amenities.

M&S Systems developed the world's first built-in home musical intercoms in 1956 and currently offers the best sound quality with continued additions to its home communication products. These systems not only provide enhanced security and room monitoring features, but also include full stereo acoustical systems that deliver concert-quality sound throughout the home.

"For more than 45 years, M&S has been developing systems that go well beyond the 'traditional' musical intercom," said Paul Stapella, general manager, M&S Systems. "An M&S system delivers excellent stereo sound, advanced security features for your home safety—and full room-to-room communication capability."

## A Safer Home

Just as the baby monitor allows parents to hear their baby in the crib, an M&S system allows you to monitor every part of your house—

including all the rooms, the patio, porch or yard—simultaneously. At the simple push of a button, you can listen in on or call to your child—and your child can call to you.

Home security is another benefit of an M&S system. A communication speaker at each entrance allows you to check who's at the door—before you open it—and the convenient ability to answer the door from any room in your home.

## A Musical Home

M&S home communication systems also provide concert-quality stereo systems with radio, cassette and CD capabilities. These systems allow you to preset up to 16 radio stations, adjust the music with bass and treble controls and provide up to 60 watts of power to drive as many as 20 music speakers, 15 intercom speakers and 4 door speakers. Full clock radio functions allow you to wake up or go to sleep to music. M&S Systems also is a leading designer and manufacturer of in-wall stereo speakers, eliminating the clutter of freestanding speakers and exposed wires.

## A "Closer" Home

Whether calling your family to dinner, asking your spouse a question or telling your children to stop giggling and go to sleep, an M&S system brings your family closer.

"With our home communication systems, we're providing the perfect solution for the parent who wishes he or she could be 'everywhere at once,'" said Gary Baker, M&S Systems director of marketing. "When you consider how busy the average American family is these days, one of our systems can help families keep track of each other."

M&S home communication systems can be included in new-home construction plans, or retrofitted to existing homes quickly and affordably. In fact, with a low installation cost and a high retained value, M&S systems actually can add to a home's resale value.

Headquartered in Dallas, Texas, M&S Systems has been an industry leader in the manufacture and design of built-in, electronic home amenities for more than 45 years. M&S is renowned for applying technology, style and value to its diverse line of products that help to enrich the enjoyment of the home, including home communication systems, home theater surround sound systems, and central vacuums. M&S products are distributed internationally, throughout the United States, Australia, Mexico, Central America and Canada.
