## Powerful Pest Control In Natural And Organic Products

(NAPSA)—Most gardeners today would agree that the main goal in pest control is to find a highly effective product that gets rid of whatever is ravaging their lawn or garden. Gardeners can find organic and natural lawn and garden products that also provide powerful solutions, giving gardeners the results they can be proud of. Knowing the answers to important questions will assist many gardeners this season as they consider natural and organic options for their gardening and pest control needs:

**Q. What organic and natural pest control products are effective?**

A. Natural ingredients now offer the performance and broad killing power gardeners demand. Insect Sprays from Garden Safe® Brand contain botanical pyrethrin with superior effectiveness that kills all stages of insects including eggs. Made from plants, Garden Safe Brand Insecticidal Soap immediately kills many insects on contact and can also be applied to vegetables up to the day of harvest. All natural neem oil extract in Garden Safe Brand Fungicide3® is another powerful natural ingredient that kills eggs, larvae and adult stages of insects and mites while also preventing various fungal diseases.

**Q. How are organic and natural pest control products comparable to traditional pesticides?**

A. Consumers may believe that many of today's organic gardening products tend to be more expensive. However, products from the Garden Safe Brand such as insect sprays, insecticidal soaps and fungicides, combine potent efficacy and can be found beside syn-

**More and more gardeners are choosing to protect their plants—and get great results—with natural and organic products.**

thetic chemicals in pest control aisles at comparable prices.

**Q. Why should gardeners make the switch to organic and natural products?**

A. Due to the EPA restricting the use of many traditional insecticides such as Diazinon and Dursban, gardeners are seeking other means of pest control, including products that contain natural and organic ingredients. Natural and organic products not only offer many of the same advantages and effectiveness of many traditional synthetic pesticides, they do it without the use of harsh chemicals.

Natural and organic products under the Garden Safe Brand offer the killing power consumers are looking for. Knowing what ingredients to look for will help today's gardeners choose which gardening and pest control methods are right for their needs.
