New Ways To Beat The Bugs

(NAPSA)—Whether you're planting flowers in your garden or watching your children play in the backyard, you're not alone—bugs are lurking, preparing to take over your lawn.

To help, you can turn to a multipurpose insect killer called Triazicide. Killing over 130 harmful insects with just one application, it works on the lawn, on bushes and trees and around the house as an insect barrier treatment. It effectively kills more types of insects than Diazinon and has environmental advantages. As the EPA (Environmental Protection Agency) implements the mandated phase-out of Diazinon, Triazicide can be considered a “next generation” insecticide.

Triazicide contains much less active ingredient to achieve broad-spectrum insect control, so it has less of an effect on the environment. Unlike other, less advanced insecticides, Triazicide does not harm earthworms.

Uniquely formulated with the progressive active ingredient Lambda-Cyhalothrin, the insecticide works in just 24 hours.

Your family, your yard and the environment can all be better off with the help of what's been called the “next generation” insecticide.

Because it's an insect barrier treatment, you can spend less time defending your lawn and more time enjoying your life.

The insecticide is available in granules and liquid concentrates at leading home centers and garden stores.

For more information on protecting your lawn and garden, call 1-800-332-5553, log on to www.spectracide.com or visit a local lawn and garden center.
