

## TECH TOPICS: DON'T LOSE YOUR WI-FI IN THE DEAD ZONE

YOUR HOUSE MAY HAVE DEAD ZONES WHERE INTERNET DEVICES CAN'T GET A GOOD WI-FI SIGNAL—BUT YOU DON'T HAVE TO LIVE WITH THAT. THE EXPERTS AT MILO-WI-FI SAY: KEEP YOUR ROUTER AWAY FROM METAL, AND GET THE LATEST HARDWARE. WI-FI ROUTERS BROADCAST OVER TWO FREQUENCIES, SO WHEN ONE IS CROWDED, SWITCH TO THE OTHER. CONSIDER A DISTRIBUTED MESH WI-FI SYSTEM, WHICH IS A MAIN WI-FI ROUTER CONNECTED TO SATELLITE DISTRIBUTION MODULES, FROM MILO WI-FI TO PROVIDE A STRONG UNINTERRUPTED SIGNAL TO EVERY DEVICE IN THE HOUSE. LEARN MORE AT [MILO-WI-FI--DOT--COM](http://MILO-WI-FI--DOT--COM).
